Abdallah Daknache

Software Engineer (Mobile & Frontend)
📍 Limassol, Cyprus · Open to Relocation
📧 abdallah.daknache@gmail.com · 🔗 LinkedIn | GitHub

SUMMARY

Software Engineer with 5+ years of experience building high-performance mobile and web applications, with a strong focus on production-grade systems. Specialized in TypeScript, React, and React Native, with hands-on experience delivering and scaling mobile trading applications used by real users. Strong background in performance optimization, debugging complex production issues, and collaborating in cross-functional, fast-paced environments. Comfortable working across the stack and motivated by large-scale, technically challenging systems.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript
Mobile: React Native
Frontend: React, Next.js
Backend: Node.js, NestJS, REST APIs, WebSockets
Cloud & DevOps: AWS, Docker, Terraform, CI/CD pipelines
Observability & Analytics: Sentry, Datadog, Segment
Testing: TDD, BDD, Jest, vite, webdriver IO, Appium
Concepts: OOP, Functional Programming, Application Lifecycles
Tools: Android Studio, Xcode, Figma

PROFESSIONAL EXPERIENCE

Frontend & Mobile Engineer

Pepperstone — Limassol, Cyprus
Jul 2022 – Present

- Core contributor to the Pepperstone Trading App, a production mobile trading application used by a large global user base.

- Developed and maintained React Native features using TypeScript, with a focus on performance, stability, and scalability.
- Designed and bootstrapped new project repositories from scratch, defining architecture, tooling, and engineering standards.
- Implemented a native iOS module to measure and analyze initial application load time, improving performance visibility.
- Diagnosed and resolved complex performance, rendering, and lifecycle issues, significantly improving responsiveness and reliability.
- Profiled renders and optimized components to reduce unnecessary re-renders and improve runtime efficiency.
- Integrated Sentry and Datadog for crash reporting, performance monitoring, and alerting in production.
- Implemented Segment to track user behavior and product analytics.
- Worked with CI/CD pipelines to automate mobile and web builds and deployments.
- Debugged network requests and runtime behavior using Android Studio emulators and native tooling.
- Collaborated closely with designers using Figma to deliver pixel-perfect, user-focused UIs.

Frontend Engineer

EverestCM — Limassol, Cyprus
Oct 2021 – Jul 2022

- Built and shipped frontend features using React and TypeScript.
- Improved performance, code quality, and maintainability of existing applications.
- Collaborated closely with backend engineers to integrate APIs and enhance application reliability.
- Used Terraform for Infrastructure as Code and Docker for containerized environments.

Frontend Developer

Orea.io — Limassol, Cyprus
Feb 2021 – Oct 2021

- Developed a React-based pre-trade frontend application.
- Built user interfaces focused on data accuracy, responsiveness, and usability.
- Worked closely with product and design teams to implement trading-related workflows.
- Contributed to frontend architecture decisions and reusable component design.

Backend Developer

GO.MEDIA KG — Germany
May 2019 – Aug 2021

- Developed backend services using NestJS and TypeScript.
- Built and maintained REST APIs and backend business logic.
- Worked on system integrations and data processing pipelines.
- Gained strong foundations in backend architecture and scalable system design.

ENGINEERING STRENGTHS

- Mobile performance profiling and advanced debugging
- Experience building financial and trading applications
- Deep understanding of JavaScript/TypeScript and application lifecycles
- Strong cross-stack collaboration (mobile, frontend, backend)
- Fast learner with the ability to adapt to new platforms and internals
